

SCWA 2026-05-22-v01 QC Report

Input Inventory

- Source file: `data-raw/scwa/2026-05-22_v01/2026-05-22_v01.zip`
- Source layer: `workbook` rows joined to named shapefiles
- Feature count: 4
- Geometry type: POLYGON
- CRS: WGS 84 source geometries; standardized to EPSG:3310
- Field count: 28

Output

- Target profile: `RestorationProjectSubmission`
- Output file: `data-standardized/scwa/2026-05-22-v01.gpkg`
- Output layer: `restoration_projects`
- Output feature count: 4
- Output CRS: `EPSG:3310`
- Program/system fields omitted from output: `project_id`, `update_date`
- Source helper fields omitted from output:
`source_project_name`, `submitted_contractors`, `submitted_early_implementation`,
`submitted_construction_start_year`, `submitted_construction_completion_year`,
`submitted_funding_gap`

Transformations

- Extracted the submitted zip to a temporary directory at runtime; raw files under `data-raw/` are not modified.
- Used workbook rows as project attributes and matched each row to a named shapefile geometry by project name.
- Converted submitted point geometries to approximate channel polygons using a 10 meter buffer in EPSG:3310.
- `Putah Gravel Augmentation and Scarification`: ordered the 91 submitted points along their dominant west-east coordinate axis, connected them into a line, and buffered the resulting line to represent the stream channel and banks.
- `Putah Creek fish passage at Los Rios Check Dam`: buffered the single submitted point to create a visible project-area polygon.
- Repaired the invalid submitted Nishikawa polygon with `sf::st_make_valid()`.
- Transformed all geometries from WGS 84 to EPSG:3310.
- `project_id` and `update_date`: omitted as program-assigned canonical-record fields.
- `Putah Gravel Augmentation and Scarification`: corrected construction start year from submitted 2016 to program-confirmed 2018.
- `early_implementation`: converted submitted 0/1 flags to logical values.
- `contractors`, `project_stage`, `project_type`, `funding_sources`, and `target_species`: normalized semicolon-delimited serialization.

- `funding_gap`: derived as `estimated_budget - funding_secured` when missing from the workbook.
- Workbook literal `null` values are treated as missing, not as text.
- Missing construction years for the two planning-stage fish-passage projects are retained as missing values for now by local review decision.
- Individual gravel point attributes are intentionally ignored; workbook-level project/group observation attributes are used for the standardized gravel project record.
- Submitted acreage values are preserved rather than replaced with geometry-derived acreage.

Validation Summary

- Errors: 0
- Warnings: 14
- Informational notes: 3

Remaining Review Items

- No unresolved construction-year exceptions remain.

Validation Details

See [reports/scwa/2026-05-22-v01_validation.csv](#) for row-level validation details.
